HTML Notes – Anchor Tag & Iframe Tag

---

1. Anchor Tag (<a>)

The **anchor tag (<a>)** is used to create **links**.
Links help users **jump from one place to another** — another website, another page, top/bottom of the same page, email, phone, or download a file.

Anchor tag works exactly like:

- A **button in lift** → takes you to another floor
- A **WhatsApp contact link** → opens chat
- A **Google Maps link** → opens map
- A **Download button** → downloads a PDF

Anchor Tag Syntax :

<a href="URL"> Text </a>

Code Explained (Line by Line)

1️⃣ Opening an external website

<a href="https://www.google.com/" target="_self" noopener>Google</a>

- href → where to go (Google website)
- target="_self" → open in **same tab**
- noopener → security feature (tab cannot steal data)

Example:

Like clicking “Google search” from a menu.

2️⃣ Open another page from the same project

<a href="./home.html">Home Page</a>

✓ Opens home.html from your local folder.

Example:

Like opening “Home” screen inside your own app.

3️⃣ Email link

<a href="mailto:abc@gmail.com">📧</a>

✓ Opens Gmail app or default mail app with this email pre-filled.

Example:

"Contact Support" buttons on websites.

4️⃣ Phone call link

<a href="tel:+910000000000">Phone</a>

✓ Opens phone dialer with the number.

Example:

“Call us now” on business websites.

5️⃣ Download a file

<a href="./notes.pdf" download>PDF DOWNLOAD</a>

✓ Directly downloads the PDF instead of opening it.

Example:

Downloading resume, brochure, notes, etc.

6️⃣ Jump to a section on the same page

<a href="#footer">Go to bottom</a>

✓ Scrolls directly to the element with id="footer".

Example:

“Go to Top” or “Skip to Menu” buttons in long pages.

7️⃣ Open page inside an iframe using name

<a href="./home.html" target="abc">Open Home Page</a>

✓ Opens home.html inside the iframe that has:

<iframe name="abc"></iframe>

Example:

Like YouTube playlist side panel → clicking a video loads in the same window.

Important anchor tag attributes

Attribute	Meaning
href	Link URL
target="_blank"	Open in new tab
download	Download file
mailto:	Send email
tel:	Call phone number
#id	Jump to same page section
target="frameName"	Open content inside an iframe

Why do we use anchor tag?

✓ Navigation
✓ Communication
✓ Downloads
✓ Smooth scrolling
✓ Linking pages inside iframe

---

2. Iframe Tag (<iframe>)

The **iframe tag** is used to display **another webpage inside your webpage**.
Like a **small window** inside a big window.

Iframe is like:

- A **TV inside your room** showing another channel
- A **small map box** in websites
- A **YouTube video box** embedded inside a webpage

Iframe Syntax

<iframe src="URL"> </iframe>

---

1. ## Embed Google Maps

```
<iframe
  src="https://www.google.com/maps/embed?pb=..."
  width="400"
  height="250"
  style="border:0;"
  allowfullscreen=""
  loading="lazy"
  referrerpolicy="no-referrer-when-downgrade">
</iframe>
```

Explanation:

- src → Google Maps embed URL
- width, height → size of map
- style="border:0;" → removes border
- allowfullscreen → full screen allowed
- loading="lazy" → load map only when user scrolls
- referrerpolicy → privacy

How do we embed Google Maps?

1. Open Google Maps
2. Search location
3. Click **Share** → **Embed a map**
4. Copy <iframe>...</iframe> code
5. Paste in your HTML

---

2. Embed YouTube Video

```
<iframe
  width="560"
  height="315"
  src="https://www.youtube.com/embed/Shib7PI6Kgc?si=EiSPd45zUGj_VXgv"
  allowfullscreen>
</iframe>
```

Explanation:

- src → YouTube *embed* URL
- allowfullscreen → full screen
- allow="..." → allow video features (autoplay etc.)

Example:

Almost every blog/music/education website uses this.

📌 **How to embed YouTube video?**

1. Open any YouTube video
2. Click **Share**
3. Click **Embed**
4. Copy <iframe> code
5. Paste in HTML

---

3. Open your HTML page inside iframe

```
<iframe src="./home.html" frameborder="1"></iframe>
```

✓ Shows any HTML file inside a small window.

Example:

City map apps show small previews of other menus.

---

4. Show PDF inside iframe

<iframe src="./git & github interviews Q A 🚀 .pdf" frameborder="0"></iframe>

You can read PDF directly inside the page.

---

5. Iframe with name (targeting system)

<iframe src="" frameborder="1" **name="abc"**></iframe>

And anchor links:

<a href="./home.html" **target="abc">** Open Home Page </a>

✓ Clicking the link loads the page **inside this iframe**.

Example:
Like a dashboard where left menu loads pages on the right.

Important iframe attributes

Attribute	Meaning
src	URL inside iframe
width / height	Size
frameborder	Border on/off
allowfullscreen	Full screen allowed
name	Works with anchor tag

Why do we use iframes?

✓ Embed maps
✓ Embed videos
✓ Show ads
✓ Show PDF
✓ Load a page inside another page
✓ Dashboard layouts
